

**MA859: SELECTED TOPICS IN GRAPH THEORY**  
**ASSIGNMENT 3**

1. Give an example of a graph  $G$  for which  $\chi(G) = 1 + \Delta(G)$ .
2. Prove or disprove: Orthogonal equivalence among  $n \times n$  is an equivalence relation.
3. Let  $G$  be a simple graph with vertex labeling  $V(G) = \{u_1, u_2, \dots, u_n\}$ . Let  $k$  be a natural number greater than zero. Prove that the entry  $a_{ij}^{(k)}$  in  $A^k(G)$  is the number of distinct walks from  $u_i$  to  $u_j$  of length  $k$  in  $G$ .
4. Write an algorithm to construct a graph  $G$  for which  $\kappa(G) = a$ ,  $\lambda(G) = b$  and  $\delta(G) = c$ , where  $a, b$  and  $c$  are integers such that  $0 < a \leq b \leq c$ .
