Project Objective- To build a predictive model on the **Titanic dataset** that answers the question: "what sorts of people were more likely to survive?" using passenger data (ie name, age, gender, socio-economic class, etc).

Bench Marks:-

- Importing packages and Data

- Cleaning the dataset by filling the missing values

- Converting the categorical features into numerical features

- Splitiing the dataset into training and testing datasets

- Model building with train data using different machine learning models and finding their accuracy using test data

- Comparision of the different Machine Learning Models and Choosing the best One

Expected Date of Project Completion: - 10 May 2021
